## INSTRUCTIONS

This form was prepared by the Nebraska Energy Office in response to a technical audit which you submitted. It lists those improvements identified in the audit report which are eligible for financing with a Dollar and Energy Saving Loan. At present, the Energy Office has not committed any funds or made any agreement to participate in a low-interest loan for the improvements listed on this form.

This **acceptance** indicates only that if the information in the audit is accurate, the estimated savings are reasonable. It does not imply Energy Office endorsement of the projects, calculations or claimed savings. Actual savings realized as a result of implementing any of the identified improvements may differ from estimates contained in the audit report. Any improvements made as a result of this audit should comply with all applicable building, safety and fire codes and loan program requirements.

**GETTING BIDS.** If you did not already submit bids or cost quotes with your technical audit, you should obtain these from one or more contractors or suppliers. Make sure that bidders are bidding on the projects as described in the technical audit.

**COMPLETE FORM 6** as described below. Then attach any new bids or cost quotes and other documentation marked

on the form and take this application to the local lending institution of your choice to apply for a Dollar and Energy Saving Loan.

**SELECT IMPROVEMENTS (COLUMN F).** Check the box for each of the improvements listed in Column A which you intend to finance with a loan.

**COST OF SELECTED IMPROVEMENTS (COLUMN G).** If you submitted actual bids or cost quotes with your technical audit, then those costs are written in Column E and you can just copy the values to Column G. Otherwise, the costs in Column E are estimates from the technical audit which must be replaced by actual bid costs or price quotes for each selected project. Add the costs in this column and write the total at the bottom.

**SAVINGS FROM SELECTED IMPROVEMENTS (COLUMN H).** Copy the estimated annual savings from Column E for each selected improvement. Then add all the savings and write the total at the bottom of the column.

**MAXIMUM LOAN LENGTH.** Divide the total from Column G by the total from Column H and write the result in the box. This is the simple payback of the selected projects — the number of years it will take the savings to repay the project cost. It is also the maximum length for a loan on the selected improvements.

**Your project may NOT be contracted for or undertaken prior to the Energy Office's approval.**

*If you do so, you will lose your eligibility to finance the project with a low interest loan.*

You may accept a bid, contingent on the Energy Office's approval of your loan, to lock in the price, but you may not proceed with the work or contractually obligate yourself to proceed until your lender notifies you that the Energy Office has approved your project and committed funds to this loan.
